With over 14 years of hands-on experience, Chadi Khadij is a talented, forward-thinking expert in network infrastructure, security solutions, and migrating IT solutions to the cloud. As a Certified Information Security Manager (CISM), Chadi has validated expertise in information security governance, program development & management, and incident management, as well as information risk management. He has an EMBA and BE in Computer Engineering from Lebanese American University (LAU) in Lebanon.

« Where decades ago, your greatest corporate assets were physical, today they are digital. As such, securing your corporate network is as important as protecting brick-and-mortar offices and stores, or other capital. With the digital economy and booming ecommerce, network and information security has come to the forefront. Information is power and we store our highly confidential and valuable information on clouds and other shared digital spaces. Thus, the riskiest security threat to a company is a breach of network security. My aim is to help my clients focus on their core business and objectives with the peace of mind that their networks function properly, are secure, and safeguard their information.»

After over a decade working with a multinational and diversified group with 10,000+ employees across 80+ operations in Middle East, North Africa, Europe, and USA, I have built thorough hands-on experience in designing network and information security strategies, troubleshooting issues, monitoring potential threats, and finding technology solutions to critical and challenging business needs. It is through this experience and our heavy focus on skill development that I believe we can add real value to our clients' operations by leveraging our subject matter expertise.

ABOUT CHADI

Chadi launched his career at INDEVCO as a Network and Telecom Administrator in 2006. Over the course of 2+ years, he built his skills in configuring routing and security features on routers and switches, as well as firewalls. He also troubleshooted network incidents and provided root cause analysis. In 2009, Chadi's scope expanded as a Specialist to review existing active and passive network architectures, and identify improvement opportunities, implement network and security solutions, as well as prepare implementation roadmaps and suggested action plans for IP telephony migration from legacy systems.

In 2012, Chadi was appointed Network Infrastructure Manager. In this role, he was responsible for IT policy development, designing security strategy for data loss, designing and implementing network infrastructure projects, managing ISO 20000 certification implementation, and designing custom IT infrastructure solutions that tailor across plants and functions.

Chadi took on the Network and Security Manager position in 2015. Setting security as a key priority, he developed the incident management procedure to ensure incidents are reported, resolved and action plans set for future prevention. He prepares and implements IT network security strategy, business plan and budget for operations in Egypt, Greece, Jordan, KSA, Lebanon, UAE, and the UK. In this role, he also launched IT infrastructure and security consultancy services with INDEVCO Consultancy, as well as manages IT consultancy projects in partnership with the Big Four.
